- Exhibit 2: Documents and Data Reviewed and Considered
- Exhibit 3: Responsiveness of the Price of Scientific-Atlanta
Common Stock to New Information

1. Qualifications and Assignment

1.1. Qualifications

1. My name is Marc Vellrath. I am an economist and financial analyst, and President of Finance Scholars Group, a consulting firm located in Emeryville, California. I am also a special consultant to ERS Group, a consulting firm with offices throughout the United States.¹ I hold M.S. and Ph.D. degrees in economics from Carnegie Mellon University and an MBA degree from the University of Washington. I also have earned the Chartered Financial Analyst designation, or CFA, awarded by the CFA Institute, which is the preeminent professional organization of securities analysts and investment managers throughout the world.

2. Before resigning from ERS Group in mid-2006 to form Finance Scholars Group, I was the Director of that firm's Finance and Commercial Damages Practice. Prior to joining ERS Group in 2004 (as a result of a merger), I was a Principal and founder of KeyPoint Consulting LLC. Before founding KeyPoint in 1996, I was a Vice President and Principal of Analysis Group, Inc., an economics consulting firm, for six years, and a senior economist with Ernst & Young, an international accounting and consulting firm, for five years. For a total of eight years, I served on the faculties of the graduate schools of business of New York University and the University of Washington. I also have taught in the loan officer training programs of two large commercial banks, Morgan Guaranty Trust Company and Chemical Bank of New York, and have been a contract researcher for Frank Russell Company, a pension fund advisory firm.

¹ ERS Group consultants have provided analytical support for the work described and reported herein.

3. I have conducted numerous investigations and consulting engagements involving a variety of economic and financial issues in many different industries. As a consultant to law firms, I have investigated economic and financial issues, including damages, arising in disputes involving antitrust, patent infringement, fraud and fraudulent conveyances, breaches of fiduciary duty, contract breaches, and other matters. As a consultant to businesses and governmental agencies, I have prepared strategic plans, marketing plans, feasibility studies, valuations, and various other studies to improve management decision-making, increase productivity and efficiency, control costs, and, in the case of corporations, raise profits.

4. Exhibit 1 to this report is a copy of my resume, which includes a list of my consulting activities and testimony over the past four years. I am being compensated for my work on this engagement at my standard hourly rate for consulting services, which is \$485 per hour. The hourly rates for ERS professionals assisting me on this engagement range between \$95 and \$450 per hour.

1.2. Assignment

5. I have been retained by Chitwood Harley Harnes LLP and Keller Rohrback L.L.P. to analyze certain economic and financial issues arising in the matter of *In Re Scientific-Atlanta, Inc. Securities Litigation*.² Specifically, in connection with the plaintiffs' claim that class members purchased common stock of Scientific-Atlanta, Inc. ("Scientific-Atlanta" or the "Company") during the class period relying upon the integrity of the market in which Scientific-

² File No. 1:01-CV-1950-RWS, U.S. District Court, Northern District of Georgia, Atlanta Division.

Atlanta's common stock traded, I have been asked to examine the efficiency of this market.³ I also have been asked to review, analyze and respond to a report by Charles C. Cox, Ph.D., submitted on behalf of the defendants in this matter.⁴ In particular, I have been asked to evaluate and respond to Dr. Cox's opinion that the plaintiffs' "efficiency claim is inconsistent with [their] allegations of material false and misleading statements".⁵

1.3. Materials considered

6. In preparing this report, I reviewed and considered relevant pleadings and filings, certain documents produced by the parties to this litigation, and information and data which staff working at my direction or I myself gathered from public sources. Exhibit 2 to this report is a list of the materials that I considered in the course of my investigation.

1.4. Additional work

7. This report contains my findings and opinions as of the date of this report. My analysis is ongoing, however, and my opinions may change if additional information relevant to the issues that I have examined comes to my attention. If requested to do so by counsel, I may undertake additional analyses of issues not addressed in this report – such as quantifying damages suffered by class members – and may develop further findings and opinions as a result of such analyses.

³ The proposed class in this matter also includes those who sold Scientific-Atlanta put options during the class period. I also consider and comment on the efficiency of the market for Scientific-Atlanta put options.

⁴ Affidavit of Charles C. Cox, signed January 19, 2007 (the "Cox Report").

⁵ Cox Report, page 4.

2. Overview of Events at Issue and Summary of Opinions

2.1. Overview of events at issue

8. This report relates to a federal securities class action against Scientific-Atlanta and two of its officers: Chairman, Chief Executive Officer, and President James F. McDonald and Senior Vice President, Chief Financial Officer, and Treasurer Wallace G. Haislip.⁶ The plaintiffs in this matter allege that the defendants “engaged in a fraudulent scheme . . . to falsely portray Scientific-Atlanta’s financial performance and the demand for its products, so that Scientific-Atlanta could continue to report consecutive quarters of growth and sequential ‘records’ in key measures such as sales, net earnings, booking, backlog and number of set-tops shipped.”⁷

9. According to the plaintiffs, the defendants’ fraudulent scheme included “channel stuffing”, a practice whereby manufacturers induce customers to purchase larger volumes of product than ordinarily purchased, even though the customers do not need the larger volume. Plaintiffs claim that defendants engaged in pervasive channel stuffing throughout the third and fourth quarters of Scientific-Atlanta’s fiscal year 2001 (i.e., from January 1, 2001, through June 29, 2001, the end of Scientific-Atlanta’s 2001 fiscal year). Although the practice of channel stuffing is not illegal per se, the plaintiffs claim that “the failure to disclose the pervasive nature of the practice and the effect it would have on future sales and earnings rendered Defendants’

⁶ The summary of events in this subsection is drawn from the *Consolidated Class Action Complaint*, dated January 31, 2002 (the “Complaint”).

⁷ Complaint, page 2.

Class Period statements about growth in sales, earnings, bookings and backlog and number of set-tops shipped materially false and misleading.”⁸

10. According to the plaintiffs, the truth began to emerge when the defendants were forced to admit in their July 19, 2001, earnings announcement that the Company “had failed to meet its revenue forecasts and analysts’ expectations for fiscal year 2001, due to decreased demand for its product, and that it was reducing its earnings forecasts for the first quarter of 2002.”⁹ This partial disclosure of the defendants’ earlier fraudulent and misleading statements was followed by an additional disclosure on August 16, 2001, when the defendants issued a press release in which they withdrew their previous guidance for the first quarter of fiscal year 2002 and for the full fiscal year 2002.

11. According to the plaintiffs, “the markets for Scientific-Atlanta securities promptly digested current information regarding the Company from all publicly available sources and reflected such information in the price[s] of Scientific-Atlanta’s securities.”¹⁰ Furthermore, “[u]nder these circumstances, all purchases of Scientific-Atlanta’s securities during the Class Period suffered similar injury through their purchase of securities at artificially inflated prices or sale of put options at artificially deflated prices, and a presumption of reliance applies.”¹¹ The defendants challenge this presumption. In support of their challenge, they cite the Cox Report

⁸ In addition, the defendants allegedly misrepresented Scientific-Atlanta’s financial performance and operating results by engaging in deceptive and improper revenue recognition practices, such as billing customers for products that had not been shipped in violation of Generally Accepted Accounting Principles (“GAAP”). Complaint, page 5.

⁹ Complaint, page 72.

¹⁰ Complaint, page 84.

¹¹ Complaint, page 84. The class period in this matter starts on January 18, 2001, and continues through August 16, 2001.

and, in particular, Dr. Cox's opinion that the plaintiffs' allegations are inconsistent with market efficiency.¹²

2.2. *Summary of opinions*

12. Based on the analyses and findings summarized later in this report, I hold the following opinions:

- a. The legal concept of "fraud on the market" is closely related to the finance concept of semi-strong form ("SSF") efficiency. This is because, by definition, in SSF efficient markets, asset prices fully and quickly reflect all available public information – including fraudulent and misleading information.
- b. "Event study" analysis – which analyzes the responsiveness of a security's price (or, equivalently, a security's returns) to announcements that contain new information – is the preferred and predominant method for assessing the SSF efficiency of any market. This form of analysis is the standard method for assessing the SSF efficiency of markets in academic research, and is widely used for this and other purposes by both academic researchers and finance practitioners.
- c. Event study analysis has been used to assess the efficiency of a wide variety of markets; it is an appropriate methodology for assessing the efficiency of the market at issue in this case, namely, the market for the common stock of Scientific-Atlanta. Event study analysis of the pricing of Scientific-Atlanta common stock shows that the market in which this stock traded was SSF efficient during the class period.

¹² See Defendants' Opposition to Plaintiffs' Motion for Class Certification, pages 6 – 11.

- d. An analysis of the structural characteristics of the market for Scientific-Atlanta stock, including the structural factors considered in the *Cammer* decision,¹³ provides additional support for the conclusion that Scientific-Atlanta common stock traded in an efficient market.
- e. The value of a put option on Scientific-Atlanta's stock depends (inversely) upon the value of the company's stock, which my analysis shows traded in an efficient market. The close (negative) correlation between the pricing of Scientific-Atlanta's put options and the pricing of Scientific-Atlanta's common stock suggest that Scientific-Atlanta's put options traded in an efficient market. Thus, the factors which affected the value of the company's stock – including any false and misleading statements by the defendants – also affected the value of Scientific-Atlanta's put options.
- f. Because the market for Scientific-Atlanta stock was SSF efficient during the class period, material false and misleading statements by the defendants would have been incorporated into and reflected in the price of Scientific-Atlantic stock. If the defendants made material favorable false and misleading statements, then the price of Scientific-Atlanta stock was higher than it otherwise would have been during the class period and, as a result, those who purchased these equity securities during the class period paid too much.¹⁴

¹³ *Cammer v. Bloom*, 711 F. Supp. 1264 (D.N.J. 1989) (the “*Cammer* decision” or “*Cammer*”).

¹⁴ By extension, because the market for Scientific-Atlanta's put options was efficient during the class period, the prices of the put options also reflected the defendants' material false and misleading statements during the class period. Consequently, prices for Scientific-Atlanta's put options were lower than they otherwise would have been and, as a result, those who sold put options during the class period received too little.

- g. Dr. Cox's claim that the plaintiffs' "efficiency claim is inconsistent with [their] allegations of material false and misleading statements" is wrong, and his event study does not support this position. There is no conflict or inconsistency between the plaintiffs' allegations and the strong evidence reported herein that the market for Scientific-Atlanta's common stock was semi-strong-form efficient.
- h. Dr. Cox's assertion that there are conflicts of interest among class members is purely theoretical; he provides no evidence that the possible conflicts he identifies are significant or serious.
- i. Dr. Cox's claim that damages in this case must be calculated on an individual basis is, at best, highly misleading. Contrary to Dr. Cox's implication, there are tried and tested methods and procedures that can be used to calculate damages in this case on a class-wide basis, without extensive individual analysis.

2.3. Overview of the remainder of this report

13. In the next section I review the finance concept of efficient markets and its relevance to the legal theory of "fraud on the market". In Section 4, I present an event study of movements in the price of Scientific-Atlanta common stock that establishes the (SSF) efficiency of the market for Scientific-Atlanta common stock. In Section 5, I review certain structural characteristics of the market for Scientific-Atlanta common stock that provide additional support for the efficiency of the market for Scientific-Atlanta common stock. In this section I also present evidence of the close (negative) correlation between the pricing of Scientific-Atlanta's put options and the

pricing of Scientific-Atlanta's common stock. I then discuss the shortcomings of Dr. Cox's report in Section 6.

3. The Efficient Market Hypothesis

14. In this section, I review the finance concept of an efficient market and discuss the connection between market efficiency, as that term is used by finance researchers, and the legal theory of "fraud on the market."

3.1. *Summary of the efficient markets hypothesis*

15. The efficient market hypothesis ("EMH") often is summarized as the claim that prices in financial markets reflect available information quickly and fully. More formally, finance researchers distinguish among three forms of the efficient market hypothesis: The weak form ("WF") of the EMH is the claim that past price movements (but not necessarily other information) are quickly and fully reflected in securities prices. This means, for example, that neither past price movements nor past returns (computed from those price movements) can be used to predict future price movements or returns.¹⁵ The semi-strong form ("SSF") of the EMH hypothesizes that *all* publicly available information is quickly and fully reflected in securities prices. This means that publicly available information – earnings announcements,

¹⁵ Security prices and security "returns" are closely related. The term "returns" refers to the change in a security's price over some time period (plus any other benefit received by an investor, such as dividend payments), often expressed as a percentage. Thus, if a security's price rises from \$10.00 on one day to \$10.10 the next, the daily return on that security was 1%. Because of the link between security prices and security returns, movements in a security's price (up or down) translate into movements in the security's returns (positive or negative, respectively).

announcements of new business contracts, announcements of acquisitions, etc. – cannot be used to predict future price movements or returns. Finally, the strong form (“SF”) of the EMH is the claim that all available information, whether publicly available or privately held, is quickly and fully reflected in securities prices. For strong form efficiency, even “inside” information must be reflected in securities prices.¹⁶

16. All of the forms of market efficiency just discussed relate to the extent to which, and the speed with which, certain kinds of information become incorporated into securities prices. For this reason, these concepts of efficiency typically are referred to as “informational” efficiency. In my experience, finance scholars almost always define efficiency in terms of informational efficiency. Indeed, a vast academic literature has been produced over the past several decades dealing with virtually every aspect of informational efficiency, and examining the informational efficiency of many different kinds of markets.¹⁷

¹⁶ Finance researchers recognize that transaction costs impose a practical limitation on the extent to which any market will be efficient (in any form). Thus, in the context of weak form efficiency, the phrase “fully reflected in” means that in such a market neither past price movements nor past returns can be used to predict future price movements or returns with sufficient precision as to enable an investor to profit from such predictions after taking into account the costs of trading. Similar refinements can be made to the definitions of semi-strong form efficiency and strong form efficiency.

¹⁷ Early empirical research on efficient markets typically examined securities traded on the New York Stock Exchange (where the common stock of Scientific-Atlanta was traded at all relevant times). (For a review of early empirical and theoretical research on efficient markets, see “Efficient Capital Markets: A Review of Theory and Empirical Work,” by Eugene Fama, *Journal of Finance*, vol. 25(2), pages 383-417, May 1970.) In recent years there has been extensive analysis of the efficiency of markets for a wide variety of equity (and debt) securities, including stocks traded on the American Stock Exchange, on foreign exchanges, and in domestic and international over-the-counter markets (such as NASDAQ).

17. In my opinion, from a finance point of view, establishing the semi-strong form informational efficiency of a market would appear to be sufficient to justify reliance on the “fraud on the market” doctrine. This is because, in a SSF efficient market, false and misleading information, such as that at issue in this case, is reflected in securities prices quickly and fully. Consequently, investors who, relying on the integrity of the market, purchase common stock of a company whose financial condition and outlook have been distorted (favorably) by material false and misleading statements, pay too much for the shares they purchase.

18. The standard and most common method of assessing semi-strong form informational efficiency is “event study” analysis. This method of analysis examines the relationship between a security’s prices (or returns) and the arrival of new information about the entity that issued the security. Thus, if a market is semi-strong form efficient, when new material information about a company becomes public, the prices of the company’s securities should respond positively if the news is favorable for the company and negatively in response to adverse news. An event study uses statistical procedures to assess whether a security’s price movements (or returns) over time exhibit statistically significant responses to announcements likely to contain new information about a company’s financial condition and prospects.

19. While event studies provide a direct measure of the informational efficiency of a given market, other indicators may provide indirect or circumstantial evidence as to whether a particular market is likely to be informationally efficient. This is because informational efficiency – of whatever form – results from the underlying characteristics and structure of the marketplace – e.g., whether the market is open to many buyers and sellers; whether there are channels through which relevant news is disseminated quickly to a broad spectrum of investors;

whether investors can place orders to buy or sell quickly and can execute trades quickly at relatively low cost; and so forth. Consequently, an examination of the characteristics and structure of a given market can provide useful, if indirect, evidence of the degree to which a given market is informationally efficient.

20. This has led analysts to consider not only the results of direct assessments of efficiency through event studies, but also to consider whether conditions in a given market are conducive to informational efficiency. However, there has been only limited academic research linking the characteristics and structure of marketplaces, with any quantitative precision, to the degree of informational efficiency found in those markets. Therefore, it is appropriate to consider indirect indicators of the informational efficiency as well.

4. Event Study of the Pricing of Scientific-Atlanta Common Stock

21. In this section, I report the results of a direct assessment of the informational efficiency of the market for Scientific-Atlanta common stock. Specifically, using event study methodology, I show that the price of Scientific-Atlanta stock responded quickly and fully to the arrival of new, material information about the performance and prospects of Scientific-Atlanta before, during, and after the class period in this matter.

22. A test of semi-strong form efficiency of the market for Scientific-Atlanta common stock requires a model of the process that generates the normal returns (i.e., price movements) on the stock. The simplest return model is the one-factor "market" model, which posits that the rate of return on an individual stock is related (by the firm's "beta") to the rate of return on a well-diversified portfolio of assets (i.e., the return on the "market" portfolio). On any given day,

according to the market model, the return on a particular stock is determined by (a) the return on the market for the day and how this affects the return on the stock in question, and (b) the effects of any firm-specific and/or random events or developments on the day. In other words, the fortunes of a company depend on events and developments that are common to all companies and events and developments that are “idiosyncratic” (i.e., either purely random or particular to that company alone).

23. To assess the efficiency of the market for Scientific-Atlanta stock, I use a variation of the one-factor market model. The modified market model that I use includes an intercept term, the return on a market index,¹⁸ and the return on an industry index.¹⁹ Thus, the return on Scientific-Atlanta stock on any given day is determined by (a) the return on the market for the day and how this affects the return on the stock in question, (b) the return on the stocks of similar companies for the day and how this affects the return on the stock in question, and (c) the effects of any firm-specific and/or random events or developments on the day. The time period I examine spans from one year before the start of the class period to one year after the end of the class period (“study period”).

24. To test whether the price of Scientific-Atlanta’s stock responded quickly and fully to the arrival of new material information, I add to my model a series of one-day dummy variables to capture the “abnormal” change in Scientific-Atlanta’s stock price on seventeen days spread

¹⁸ I use the CRSP value-weighted market index as a proxy for the trend of the whole market. “CRSP” refers to the Center for Research on Securities Prices at the Graduate School of Business of the University of Chicago. The Center is widely recognized as a leading provider of comprehensive and accurate historical financial databases.

¹⁹ I use the net of market return on the S&P Communication Equipment Index to measure trends in the communication equipment industry that are unrelated to general market movements.

throughout the study period on which there were significant public announcements related to the financial condition or outlook of Scientific-Atlanta.²⁰ The seventeen dates that I examine are listed in the table below:²¹

Actual Event Date ²²	Event Description
1/18/2000	Deutsche Bank Alex. Brown issues a positive report on Scientific-Atlanta mentioning expectations for strong revenue growth.
1/25/2000 *	Scientific-Atlanta issues an earnings release for fiscal Q2 2000 (quarter ended December 31, 1999) and announces that profits rose 53% to 36 cents per share, exceeding analyst forecasts. On the following day, Merrill Lynch upgrades Scientific-Atlanta to "long-term buy" from "long-term accumulate".
3/1/2000 *	Scientific-Atlanta announces it will increase digital set-top production capacity to one million units per quarter to meet customer demand. ABN AMRO raises Scientific-Atlanta's price target to \$150.00 from \$105.00 per share.
4/25/2000 *	Scientific-Atlanta issues an earnings release for fiscal Q3 2000 (quarter ended March 31, 2000) and announces that net income rose 83%, beating analyst forecasts. On the following day, SG Cowen and Morgan Stanley Dean Witter upgrade Scientific-Atlanta to "strong buy".
7/6/2000	Wit SoundView reiterates "strong buy" rating of Scientific-Atlanta and increases earnings per share estimates for FY 2000 and FY 2001.
8/14/2000	Gerard Klauer Mattison downgrades Scientific-Atlanta to "neutral" from "buy" on expectations for slower demand and strong competition.
10/19/2000 *	Scientific-Atlanta issues an earnings release for fiscal Q1 2001 (quarter ended September 31, 2000) and announces that net earnings rose 153% over prior year, beating analyst expectations. On the following day, Credit Suisse First Boston and Josephthal & Co upgrade Scientific-Atlanta.

²⁰ Each one-day dummy variable is assigned a value of "1" on the date of interest, and a value of "0" on all other days.

²¹ These "event dates" are different from Dr. Cox's "Reaction Dates", which I understand are dates during the class period on which Dr. Cox claims (incorrectly) there should have been statistically significant positive movements in the price of Scientific-Atlanta common stock, as a result of the defendants' alleged improper conduct. In contrast, my event dates are simply days during the study period (which starts before and ends after the class period) on which new material information about Scientific-Atlanta was made available to the marketplace. Examining such days sets the stage for testing the efficiency of the market for Scientific-Atlanta's stock.

²² Announcements on event dates marked with a "*" were issued after the close of trading on the NYSE.

11/27/2000	Scientific-Atlanta announces that it understands that AT&T Broadband will limit its receipt of product shipments for the remainder of the quarter. ²³
12/22/2000	CIBC World Markets' analyst maintains "buy" rating of Scientific-Atlanta but cuts his price target to \$50.00 from \$90.00 per share.
2/14/2001	Josephthal & Co. issues a positive report on Scientific-Atlanta, reiterating a "strong buy" rating. Kaufman Bros issues a positive report on Scientific-Atlanta, reiterating a "buy" rating. On Feb. 13, 2001, after market close, Deutsche Bank Alex. Brown issues a report predicting strong set-top box demand ahead and gives Scientific-Atlanta a "strong buy" rating.
6/13/2001	Josephthal & Co. downgrades Scientific-Atlanta from "strong buy" to "buy" on concerns of a slowing economy.
7/12/2001	ABN AMRO issues a report in which it lowers FY2002 earnings estimates for Scientific-Atlanta. The report mentions a "more cloudy" outlook for Scientific-Atlanta in light of Motorola's strong quarter but decreasing orders.
7/19/2001 *	Scientific-Atlanta issues an earnings release for fiscal Q4 2001 (quarter ended June 30, 2001) and FY 2001 and announces that quarterly sales missed estimates. Management lowers sales and profit forecasts for fiscal Q1 2002 and FY 2002. On the following day, a number of analysts downgrade Scientific-Atlanta and lower their estimates.
8/16/2001 *	Scientific-Atlanta files SEC Form 10-K and withdraws previous guidance for fiscal Q1 2002 and FY 2002, citing a declining number of quarter-over-quarter digital subscribers added. On the following day, Banc of America Securities and Wachovia Securities downgrade Scientific-Atlanta.
10/18/2001 *	Scientific-Atlanta issues an earnings release for fiscal Q1 2002 (quarter ended September 31, 2001) and announces that earnings dropped to \$37.1 million, a 42% decline from the comparable period of the prior year, but results beat analyst expectations. Scientific-Atlanta also announces a restructuring plan which includes a 10% reduction of its workforce, which is expected to cut costs by \$61 million annually. Scientific-Atlanta also announces that it has won a new order from AOL Time Warner for 625,000 set-top boxes. On the following day, Merrill Lynch and ABN AMRO upgrade Scientific-Atlanta.
1/17/2002 *	Scientific-Atlanta issues an earnings release for fiscal Q2 2002 (quarter ended December 31, 2001). Quarterly earnings declined 45% from the comparable period of the prior year but they beat analyst expectations. On the following day, H.C. Wainwright upgrades Scientific-Atlanta to "buy" from "accumulate".
4/25/2002	Merrill Lynch downgrades Scientific-Atlanta to near-term "reduce/sell" from near-term "neutral".

²³ The press release for this event date was issued initially at 11:47 am EST on November 24, 2000. Since this was the Friday after Thanksgiving, the NYSE closed early – at 1:00 pm EST. The same press release was reissued on Monday, November 27, 2000 at 9:30 am.

25. The results of my analysis are reported in Exhibit 3 to this report.²⁴ I find large and statistically significant abnormal movements in the price of Scientific-Atlanta stock on each of these seventeen announcement days. The magnitude of the abnormal returns range from a positive 21% change on October 18, 2001, when Scientific-Atlanta issued its earnings announcement for the first quarter of its fiscal year 2002 and a restructuring plan, to a negative 35% change on July 19, 2001, associated with Scientific-Atlanta's earnings release for fiscal Q4 2001 and announcement that quarterly sales were below estimates. Each of these announcement responses is statistically significant (i.e., different from zero) at the 95% confidence level, which is commonly used as a standard in academic research. All but two of these announcement responses are statistically significant at the 99% confidence level. Importantly, five of the tested announcement days fall during the class period.

26. That announcements of new information on seventeen separate days spread throughout the study period caused large and statistically significant movements in the price of Scientific-Atlanta stock is strong evidence that the market for this stock was semi-strong form efficient. This confirms that the market processed information about Scientific-Atlanta quickly and fully, and makes it highly likely that fraudulent and misleading statements by the defendants in this

²⁴ Exhibit 3 presents the results of an event study in which I use data for the entire study period (i.e., from one year before the class period and through the class period) to estimate the coefficients of the market model. As an alternative, I conducted an event study using only data from *before* the start of the class period to estimate the coefficients of the market model. I found that the five "event" days in the class period still exhibited large and statistically significant abnormal movements in the price of Scientific-Atlanta's stock when I used this different estimation period. As a further check on the "robustness" of my results, I estimated several other variations of my model as well, and consistently obtained results similar to those reported here.

case were quickly and fully reflected in the price of Scientific-Atlanta stock throughout the class period.

5. Structural Characteristics of the Market for Scientific-Atlanta Stock

27. As discussed above, an examination of the characteristics and structure of a given market can provide useful, if indirect evidence of the degree to which a given market is informationally efficient. I examine this kind of evidence as to the informational efficiency of the market for Scientific-Atlanta stock in this section. At the end of this section I report evidence establishing the close (negative) correlation between the pricing of Scientific-Atlanta's put options and the pricing of Scientific-Atlanta's common stock, which evidence, along with other facts, supports the position that the market for Scientific-Atlanta put options was, like the market for Scientific-Atlanta's stock, informationally efficient.

5.1. Trading volume

28. Among the structural indicators of likely efficiency is the volume of trading in a particular security. The *Cammer* decision states that "Turnover measured by average weekly trading of two percent or more of the outstanding shares would justify a strong presumption that the market for the security is an efficient one."²⁵ Per *Cammer*, a large volume of weekly stock trades implies an efficient market in that many investors used corporate information as the basis for executing trades.²⁶ As shown in the table below, the average weekly turnover rates for

²⁵ *Cammer*, page 1286.

²⁶ *Cammer*, page 1286.

Scientific-Atlanta common stock for the years 2000 through 2002 (even before controlling for short weeks) were well above the *Cammer* threshold for a “strong presumption” of market efficiency.²⁷

Trading in Scientific-Atlanta Common Stock			
	2000	2001	2002
Average Weekly Volume	5.2%	7.2%	6.0%

5.2. Security analysts

29. The *Cammer* decision states that “it would be persuasive to allege a significant number of securities analysts followed and reported on a company’s stock during the class period.”²⁸ It continues to state that the existence of analysts implies that company reports were closely reviewed and interpreted by investment analysts, who would make recommendations to investors based on the information contained in such reports.²⁹ According to First Call and Investext,³⁰ at least twenty different security analysts issued reports or commentary on Scientific-Atlanta’s common stock in 2001, indicating close review of Scientific-Atlanta financial reports by investment professionals. The number of security analysts following Scientific-Atlanta in 2001 supports my finding that the market for Scientific-Atlanta was (semi strong form) efficient.

²⁷ Average weekly turnover is calculated as the average weekly volume traded as a percentage of the number of shares outstanding, adjusted for stock splits. Source: Bloomberg.

²⁸ *Cammer*, page 1286.

²⁹ *Cammer*, page 1286.

³⁰ Source: First Call and Thomson Financial Investext.

5.3. *Market makers and arbitrageurs*

30. The *Cammer* decision observes that “[t]he existence of market makers and arbitrageurs would ensure completion of the market mechanism; these individuals would react swiftly to company news and reported financial results by buying or selling stock and driving it to a changed price level.”³¹ Scientific-Atlanta was traded on the New York Stock Exchange (“NYSE”), the largest stock exchange in the world, and not in the over-the-counter market. Under the NYSE system, trading in the common stock of Scientific-Atlanta is managed by a specialist firm, rather than by over-the-counter market makers. Under NYSE rules, specialists have a higher duty to maintain an orderly market in a stock than do market makers.³² The fact that trading in Scientific-Atlanta common stock was managed by a NYSE specialist supports a presumption that the market for Scientific-Atlanta was (semi strong form) efficient.

5.4. *Eligibility to file Form S-3*

31. The *Cammer* decision states that “the existence of Form S-3 status is an important factor weighing in favor of finding that a market is efficient Such entitlement comes from issuing Exchange Act reports for 36 months . . . and from having a sufficient ‘float.’”³³ The decision states further that “it is the number of shares traded and value of shares outstanding that involve the facts which imply efficiency.”³⁴ To my knowledge, Scientific-Atlanta did not use Form S-3

³¹ *Cammer*, pages 1286 and 1287.

³² *Cammer*, footnote 27.

³³ *Cammer*, page 1285. Emphasis in original.

³⁴ *Cammer*, page 1287. In *Cammer*, at page 1271, the “float” is defined as voting stock held by non-affiliates, which stock had a market value of \$150 million.

in connection with a security offering during the study period. However, Scientific-Atlanta appears to have met the eligibility requirements to file Form S-3, as it had been filing reports under the Exchange Act since 1994³⁵ and had over \$2 billion in aggregate market value of voting stock held by non-affiliates at the end of fiscal years 2000, 2001, and 2002.³⁶ The fact that Scientific-Atlanta would have been eligible to issue securities based on filing a Form S-3 if it had chosen to do so, supports a presumption that the market for Scientific-Atlanta was (semi strong form) efficient.

5.5. Additional Factors

32. Additional factors which may be relevant in assessing the efficiency of the market for Scientific-Atlanta's common stock include: market capitalization, bid-ask spread, and "float" percentage.³⁷ I provide data on each of these items in the following three subsections. In addition, I note that Scientific-Atlanta was included in the S&P 500 stock price index, which is Standard and Poor's primary index and "focuses on the large cap segment of the market,"³⁸ including companies that are "considered leading companies in leading industries."³⁹ The eligibility criteria for inclusion in the S&P 500 include, among other things, a high amount of

³⁵ For example, Scientific-Atlanta, Inc. Form 10-Q for the quarter ending December 31, 1993, filed February 11, 1994.

³⁶ Source: Scientific-Atlanta, Inc. 10-K for the fiscal years ended June 30, 2000, June 29, 2001, and June 28, 2002.

³⁷ See, e.g. *Cheney v. Cyberguard Corp.*, 213 F.R.D. 484 (S.D. Fla. 2003) (citing *Krogman v. Sterritt*, 202 F.R.D 467 (N.D. Tex 2001) at 474).

³⁸ See "S&P 500," <http://www.indices.standardandpoors.com> (visited March 12, 2007).

³⁹ See "S&P U.S. Indices Index Methodology," <http://www.indices.standardandpoors.com> (visited March 12, 2007).

public float (50% or greater), adequate liquidity (based on volume traded relative to market capitalization), and large market capitalization.⁴⁰

5.6. Market Capitalization

33. Market capitalization of a company “may be an indicator of market efficiency because there is a greater incentive for stock purchasers to invest in more highly capitalized corporations.”⁴¹ At the end of June 2000, 2001, and 2002 (at fiscal year end), Scientific-Atlanta’s market capitalization⁴² was approximately \$11.8 billion, \$6.6 billion, and \$2.5 billion respectively.⁴³ Scientific-Atlanta’s market capitalization at these times is in the top one-third of communications equipment companies included in the S&P Supercomposite Communications Equipment Index.⁴⁴ The *Cheney* and *Krogman* decisions state that market capitalization in the top sixty percent of the relevant sample group weigh in favor of market efficiency. Thus, Scientific-Atlanta’s large market capitalization supports the presumption that the market for Scientific-Atlanta common stock was efficient.

⁴⁰ See “S&P U.S. Indices Index Methodology,” <http://www.indices.standardandpoors.com> (visited March 12, 2007).

⁴¹ *Krogman v. Sterritt*, 202 F.R.D. (N.D. Tex. 2001), at 478 (citing *O’Neil v. Appel*, 165 F.R.D. 479 (W.D. Mich. 1996) at 503).

⁴² Market capitalization is calculated as the number of shares outstanding at period end date multiplied by prevailing share price.

⁴³ As reported by Bloomberg.

⁴⁴ This index includes all communications equipment companies included in the S&P Supercomposite index, which encompasses the S&P 500, S&P MidCap 400, and S&P SmallCap 600.

5.7. *Bid-Ask Spread*

34. The *Krogman* decision states that a “large bid-ask spread is indicative of an inefficient market, because it suggests that the stock is too expensive to trade.”⁴⁵ In this decision a spread equal to 5.6% of closing price suggested market inefficiency.⁴⁶ In *Cheney*, an average daily relative bid-ask spread of 2.4% weighed in favor of market efficiency.⁴⁷ As can be seen in the table below (based on data from CRSP, the Center for Research on Security Prices at the University of Chicago), the average daily bid-ask for Scientific-Atlanta stock was less than 2% for the years 2000, 2001, and 2002, well below the levels cited in the *Krogman* and *Cheney* decisions. This low bid-ask spread supports the presumption that the market for Scientific-Atlanta common stock was efficient.

Bid-Ask Spread as a Percentage of Closing Price			
	2000	2001	2002
Scientific-Atlanta	1.9%	1.0%	1.0%

5.8. *“Float” Percentage*

35. The *Krogman* decision observes that “[i]n determining efficiency, courts also consider the percentage of shares held by the public, rather than insiders.”⁴⁸ In the *Cheney* decision, 5% of shares outstanding held by insiders (i.e., a 95% float) was taken as supportive of the

⁴⁵ *Krogman*, 202 F.R.D at 478.

⁴⁶ *Krogman*, 202 F.R.D at 478.

⁴⁷ *Cheney*, 213 F.R.D. at 501.

⁴⁸ *Krogman*, 202 F.R.D at 478 (citing O’Neil, 165 F.R.D. at 503).

presumption of market efficiency. Scientific-Atlanta had a higher float percentage than the level cited in the *Cheney* decision, with float percentages greater than 96% at the end of years 2000, 2001, and 2002.⁴⁹ This high float percentage further supports the presumption that the market for Scientific-Atlanta common stock was efficient.

5.9. *Relationship between pricing of Scientific-Atlanta put options and common stock*

36. That the market for common stock of Scientific-Atlanta was SSF efficient during the class period is strongly supported by my event study results (set forth in Section 4) and by an examination of the structural characteristics of this market (as set forth earlier in this section). In my opinion, because trading in options to buy or sell the stock of major companies is closely tied to trading in the underlying stock, the demonstrated efficiency of the market for Scientific-Atlanta's common stock implies with high likelihood that the market for Scientific-Atlanta's put options was also informationally efficient.

37. Other facts and analyses support this position. For example, put options on Scientific-Atlanta's stock were traded on the Chicago Board Options Exchange ("CBOE") since at least 1996. The CBOE is an exchange where standardized stock options are traded on a centralized marketplace. Citing the *Bromberg* decision, the court in *Cammer* states that "at a minimum, there should be a presumption—probably conditional for class determination—that certain markets are developed and efficient for virtually all the securities traded there: the New York and

⁴⁹ Source: Scientific-Atlanta, Inc. Proxy Statements for annual meeting of shareholders on November 8, 2000, November 7, 2001, and November 7, 2002. Scientific-Atlanta reports aggregate shares beneficially owned by all directors and executive officers as a group as approximately 2.6%, 2.2%, and 3.2% at time of shareholder meeting in years 2000, 2001, and 2002 respectively.

American Stock Exchanges, the Chicago Board Options Exchange and the NASDAQ National Market System. The presumption would be rebuttable on a showing that the specific security in question is inactively traded on the market or unresponsive to new information.”⁵⁰

38. An analysis of the pricing of Scientific-Atlanta’s put options indicates that the presumption that these put options traded in an efficient market is reasonable. According to data obtained from OptionMetrics, 536 put option contracts on Scientific-Atlanta’s stock traded on the CBOE during my study period. The expiration dates for these options ranged from January 2000 to January 2005, and the strike prices ranged from \$2.50 to \$260. I examined the pricing of three put option contracts which traded during the study period. The first contract expired on December 16, 2000, and had a strike price of \$80; the second expired on September 22, 2001, and had a strike price of \$75; and the third expired on January 17, 2004, and had a strike price of \$80. Taken together, price data for these three put option contracts cover almost every trading day during my study period. Two observations can be made about the prices for these three put options. First, daily movements in the prices of these three put options were highly negatively correlated with movements in Scientific-Atlanta’s stock price, for each option, the correlation between daily option price movements and daily movements in the underlying stock price was between $-.90$ and -1.0 .⁵¹ Second, the bid prices of these put options react simultaneously to information that affects Scientific-Atlanta’s stock price (but in the opposite direction). For

⁵⁰ *Cammer*, page 1292.

⁵¹ The price of a put option on a stock is inversely related to the price of the underlying stock; all else equal, the higher the price of the underlying stock, the lower the price of the put option. A correlation of -1.0 implies that two variables are perfectly negatively correlated.

example, between July 19, 2001, and July 20, 2001, when Scientific-Atlanta's stock price fell by 35%, the price of the September 22, 2001, \$75 put option contract rose by 31%. These facts confirm the close relationship between the pricing of put options on Scientific-Atlanta's common stock and the pricing of the underlying common stock, and support the position that the market for put options on Scientific-Atlanta's common stock was informationally efficient.

6. Response to the Cox Report

6.1. Summary of the Cox Report

39. Counsel for the defendants in this matter retained Dr. Charles Cox "to analyze the economic evidence as it pertains to the Plaintiffs' burden of proof concerning the purported correction of alleged prior disclosure defects in the August 16, 2001 press release and to their assertions of market efficiency and lack of conflicts [and] to opine on the feasibility of estimating class-wide damages."⁵² Dr. Cox offers four opinions:⁵³

- (a) "Plaintiffs' burden of proof regarding the alleged corrective disclosures in the August 16, 2001 press release is especially high."
- (b) "The Complaint's efficiency claim is inconsistent with its allegations of material false and misleading statements."
- (c) "Conflicts of interest exist between Class Members."
- (d) "Because no reliable model exists to estimate aggregate damages, damages must be calculated on an individual basis."

40. This section of my report focuses on Dr. Cox's opinion with respect to the efficiency of the market for Scientific-Atlanta common stock. Specifically, I explain why Dr. Cox is wrong

⁵² Cox Report, page 3.

⁵³ Cox Report, pages 3 and 4.

when he asserts that the plaintiffs' allegations of material false and misleading statements are inconsistent with their claim (and the strong evidence reported here) that the market for Scientific-Atlanta's common stock was efficient.⁵⁴

6.2. *The basis for Dr. Cox's claim of inconsistency*

41. Importantly, Dr. Cox does not claim that the market in which Scientific-Atlanta's common stock traded was not efficient, nor does he claim that the market in which put options on Scientific-Atlanta's common stock traded was not efficient. Instead, Dr. Cox claims to have demonstrated an *inconsistency* between the efficiency of the market for Scientific-Atlanta common stock and the plaintiffs' assertions that the defendants made material false and misleading statements during the class period, which statements had the affect of inflating the price of Scientific-Atlanta's common stock (and deflating the price of put options on Scientific-Atlanta's common stock).

⁵⁴ My focus on Dr. Cox's "inconsistency" opinion does not mean that I accept or agree with Dr. Cox's other opinions. Contrary to Dr. Cox's first opinion, I find that the movements in the price of Scientific-Atlanta's common stock on July 19, 2001, and on August 16, 2001, and the events that led to these price movements, are fully consistent with the plaintiffs' assertion that there was a partial disclosure of the fraud at Scientific-Atlanta on the first date, and a further, more complete disclosure of the fraud on the second date, both of which caused significant downward movements in the price of Scientific-Atlanta common stock. Regarding Dr. Cox's third opinion (that there are conflicts among class members), I note that the possible conflicts Dr. Cox finds are purely theoretical, and based on the presumption that class members do not seek fair compensation for their losses, but instead seek to manipulate the judicial system to maximize their gain. I note also that Dr. Cox provides no evidence that the possible conflicts he identifies are real and sufficiently strong to affect the actual behavior of class members, in this or any other securities class action. Finally, contrary to Dr. Cox's opinion that damages must be calculated on an individual basis, I believe there are tried and tested methods and procedures by which damages of class members can be computed on a formulaic class-wide basis, with relatively little individual analysis.

42. Dr. Cox bases his claim of inconsistency on an event study of the movements in the price of Scientific-Atlanta common stock on twenty “reaction dates”. Although he does not say so, I understand Dr. Cox’s “reaction dates” to be the dates of certain announcements by Scientific-Atlanta “mentioned in the Complaint”.⁵⁵ Dr. Cox reports finding no “statistically significant positive stock price movement” on any of his twenty “reaction dates”.⁵⁶ According to Dr. Cox, “[t]hese results indicate that the Complaint’s efficiency claim is inconsistent with its allegations – either the market for S-A’s stock was not efficient or the allegedly false and misleading statements did not cause ‘artificial inflation’ in the stock price.”⁵⁷

6.3. *The fundamental flaw in Dr. Cox’s reasoning*

43. Dr. Cox’s claim of inconsistency is based on this simple premise: “If the market for S-A stock was efficient and these statements caused ‘artificial inflation’ in the stock price as the Complaint alleges, then we should observe this inflation on the first date each statement was reflected in the stock price.”⁵⁸ This premise is wrong, for a variety of reasons. Contrary to Dr. Cox’s premise, nothing in the plaintiffs’ allegations requires or implies that there would have

⁵⁵ Where an announcement was made after the close of trading, Dr. Cox correctly identifies the “reaction date” as the day after the announcement.

⁵⁶ Dr. Cox’s event study procedures differ somewhat from the ones I employed earlier in this report (e.g., his model does not include an industry factor in the return-generating function). Using my procedures to examine Dr. Cox’s “reaction dates” I get results generally similar to those reported by Dr. Cox. As explained below, the reason Dr. Cox is wrong here is not that his empirical results are wrong, but that his underlying premise is wrong. His results simply do not imply any inconsistency of the sort he claims to have identified.

⁵⁷ Cox Report, page 8.

⁵⁸ Cox Report, page 6.

been a statistically significant (abnormal) increase in the price of Scientific-Atlanta's stock price on any of the days he examines.

44. To see that Dr. Cox's premise is wrong, consider a simple example. Suppose that investors expect a company to announce quarterly earnings of \$2.00 per share. Suppose that the company's actual earnings for the quarter, unknown to the public, are just \$1.00 per share. But suppose that the company nonetheless announces to the public that its earnings are \$2.00 per share. Clearly this statement is false and misleading. Just as clearly, such a statement would artificially maintain the price of the company's stock *at an inflated level* – by preventing a sharp decline in that price.⁵⁹ Yet there is absolutely no reason to expect to observe an abnormal positive price movement on the day of this announcement. Using Dr. Cox's reasoning, however, if this market is efficient, finding no (statistically significant) price movement would be inconsistent with a claim that the announcement of earnings of \$2.00 per share was fraudulent. This reasoning is clearly wrong.

45. There are other reasons why Dr. Cox's premise is wrong. Suppose management of a company makes a series of false statements, each of which artificially raises the price of the company's common stock by, say, 2%. Undoubtedly over time such a series of false statements would cause a substantial artificial inflation in the price of the company's stock. Nonetheless, in

⁵⁹ Part of the problem with Dr. Cox's analysis is that he identifies "artificial inflation" in a company's stock price with an (abnormal) upward movement in the company's stock price. But as this example illustrates, a stock price can be artificially inflated even where there is no upward movement in the stock price, e.g., when false and misleading statements are issued to prevent a price drop that would occur absent the statements. Thus, Dr. Cox's tests for statistically significant upward price movements are *not* tests for artificial inflation in Scientific-Atlanta's stock price.

such circumstances, Dr. Cox's procedures would reject any claim that the company's false statements inflated the company's stock price. The nature of testing for statistical significance is such that the absolute value of an observed price movement must exceed a particular magnitude (which varies from case to case) in order to be deemed "statistically significant". Indeed, in Dr. Cox's event study, the price of Scientific-Atlanta common stock must change by almost 9% or more in a single day in order to be deemed statistically significant (at the 95% confidence level in a one-tailed test).⁶⁰

46. Returning to my example, given true (but unobserved) inflationary effects of 2%, there is no reason to expect to observe a positive price jump of 9% or more following any of the false announcements described above (although such an increase might happen occasionally by chance). However, using Dr. Cox's reasoning, if this market is efficient, a finding that there were no significant price movements on the relevant "reaction dates" would lead one to reject a claim that the series of false announcements hypothesized here was fraudulent. Again, Dr. Cox's reasoning is clearly wrong.

47. Furthermore, Dr. Cox fails to examine or consider the *content* of any of the announcements that underlie his list of "reaction dates", and provides no support for his claim that, based on the plaintiffs' allegations, the price of Scientific-Atlanta stock should have risen at all in response to these announcements, much less by almost 9% or more. Thus, the hypothesis that Dr. Cox tests and rejects – namely, that the price of Scientific-Atlanta stock rose by a

⁶⁰ Cox Report, note to Exhibit 1-F.

statistically significant amount on each of his twenty “reaction dates” – is a “straw man”, with no real connection to the plaintiffs’ allegations.

48. Finally, I note that Dr. Cox completely ignores the large and statistically significant *negative* movements in Scientific-Atlanta’s stock price on July 19, 2001 and on August 16, 2001, which are the dates identified by the plaintiffs as “disclosure” dates.⁶¹ That there were large and statistically significant abnormal declines in the price of Scientific-Atlanta’s common stock on these dates is beyond dispute. If the plaintiffs are right that these price drops were responses to disclosures of earlier false and misleading statements, this is powerful evidence in support of the plaintiff’s allegations.

7. Conclusion

49. An event study of the behavior of the price of Scientific-Atlanta common stock before, during and after the class period provides strong support for the position that the market for Scientific-Atlanta stock was semi-strong form efficient. Furthermore, contrary to views expressed by Dr. Cox, there is no inconsistency whatsoever between (a) the plaintiffs’ claim (and my finding) that Scientific-Atlanta common stock traded in an efficient market and (b) the plaintiffs’ claim that the defendants made material false and misleading statements that artificially inflated the price of Scientific-Atlanta stock.

⁶¹ Dr. Cox does discuss the announcements on these two dates (on pages 6 through 8 of his report), but does not include them in his event study. Nor does he report the statistically significant price drops on either of these dates – even though they are far larger than any of the price responses he does report.

RECENT TESTIMONY AND EXPERT REPORTS

(2003 to present in chronological order)

Uecker & Associates, Inc., Liquidating Trustee for the Estate of Clarent Corporation v. Ernst & Young LLP, JAMS DISPUTE RESOLUTION CENTER, SAN FRANCISCO
Expert report on damages suffered by Clarent Corporation as a result of alleged breach of conduct and professional negligence by Ernst & Young. (2007)

United States of America v. Jeffrey K. Skilling and Kenneth L. Lay, U.S. DISTRICT COURT, SOUTHERN DISTRICT OF TEXAS, HOUSTON DIVISION
Expert report on the harm caused by the fraudulent conduct of Jeffrey K. Skilling prepared for consideration in determining Mr. Skilling's sentence under applicable federal sentencing guidelines. (2006)

United States of America v. Kevin Howard and Michael Krautz, U.S. DISTRICT COURT, SOUTHERN DISTRICT OF TEXAS, HOUSTON DIVISION
Expert report on the harm caused by the "Braveheart" scheme to inflate revenues and earnings of Enron Broadband Services, prepared for purposes of determining Mr. Howard's sentence under applicable federal sentencing guidelines. (2006)

In re Mutual Fund Investment Litigation (Janus Track), U.S. DISTRICT COURT, DISTRICT OF MARYLAND
Declaration examining the magnitude of possible shareholder losses arising from improper rapid trading in Janus mutual funds. (2006)

In re Friedman's, Inc. Securities Litigation, U.S. DISTRICT COURT, DISTRICT OF MARYLAND
Expert report and reply report examining the efficiency of the market for common stock of Friedman's, Inc. (2006)

McDaniel Family Trust v. Wells Fargo & Company, et al., U.S. DISTRICT COURT, NORTHERN DISTRICT OF CALIFORNIA
Declaration setting forth a method for comparing the "financial interests" of competing groups of proposed lead plaintiffs in class action litigation involving revenue sharing and sales practices in the marketing of mutual funds. (2006)

Geneva Pharmaceuticals Corp. as successor in interest to Invamed, Inc. v. Barr Laboratories, Inc., et al., and Apothecon, Inc. v. Barr Laboratories, Inc., et al., U.S. DISTRICT COURT, SOUTHERN DISTRICT OF NEW YORK

Multiple expert reports and deposition testimony on antitrust damages arising from alleged efforts to delay a manufacturer's launch of a competing generic product. (2001-2005)

In re: Patriot American Hospitality, Inc., Securities Litigation, U.S. DISTRICT COURT, CENTRAL DISTRICT OF CALIFORNIA

Declaration setting forth a proposed plan of allocation for a class action settlement fund, approved by the court as drafted. (2005)

Compañia Nitrógeno de Cantarell S.A. de C.V. v. ICA/Fluor Daniel – Linde A.G., Joint Venture, et al., JUDICIAL ARBITRATION AND MEDIATION SERVICES

Testimony at an arbitration hearing regarding consequential damages resulting from design defects at the world's largest nitrogen production facility. (2005)

Michael Hoffman, at al., v. UBS-AG, et al., U.S. DISTRICT COURT, SOUTHERN DISTRICT OF NEW YORK

Declaration setting forth a method for comparing the "financial interests" of competing groups of proposed lead plaintiffs in class action litigation involving revenue sharing and sales practices in the marketing of mutual funds. (2005)

Ultimax Cement Manufacturing Corporation, et al., v. CTS Cement Manufacturing Corporation, et al., U.S. DISTRICT COURT, CENTRAL DISTRICT OF CALIFORNIA

Expert report and deposition testimony on reasonable royalty and lost profits damages from patent infringement and on unjust enrichment from theft of trade secrets. (2004)

In re: Mutual Fund Investment Litigation, U.S. DISTRICT COURT, DISTRICT OF MARYLAND

Declarations in multiple actions setting forth a method for comparing the "financial interests" of competing groups of proposed lead plaintiffs in class action litigation arising from improper market timing and late trading in mutual funds; declarations files in actions involving the following mutual fund families and other entities. (2003 – 2004)

Alliance Capital Management LP
Bank of America Corp.
Bank One Corp. / Nations Funds

Naresh Chand v. American Express Company, et al., U.S. DISTRICT COURT, SOUTHERN DISTRICT OF NEW YORK

Declaration setting forth a method for comparing the "financial interests" of competing groups of proposed lead plaintiffs in class action litigation involving revenue sharing and sales practices in the marketing of mutual funds. (2004)

John M. Spahn, IRA v. Edward D. Jones & Co., et al., U.S. DISTRICT COURT, EASTERN DISTRICT OF MISSOURI

Declaration setting forth a method for comparing the "financial interests" of competing groups of proposed lead plaintiffs in class action litigation involving revenue sharing and sales practices in the marketing of mutual funds. (2004)

Richard S. Johnson, at al., v. Morgan Stanley DW, Inc., et al., U.S. DISTRICT COURT, SOUTHERN DISTRICT OF NEW YORK

Declaration setting forth a method for comparing the "financial interests" of competing groups of proposed lead plaintiffs in class action litigation involving revenue sharing and sales practices in the marketing of mutual funds. (2003)

Medicus Formulas, Inc. at al. v. Thane, Inc., et al., CALIFORNIA SUPERIOR COURT, COUNTY OF RIVERSIDE

Deposition testimony on damages arising from breach of an agreement involving telemarketing of diet products. (2003)

International Insurance Underwriters, Inc., at al. v. Takagi & Associates, Inc., et al., SUPERIOR COURT OF GUAM

Trial testimony on the market effects of certain pricing practices in the market for commercial brokerage services in Guam. (2003)

Joseph Grazel, M.D., v. St. Jude Medical, Inc., et al., U.S. DISTRICT COURT, DISTRICT OF NEW JERSEY

Expert report and deposition testimony on the commercial success of patented improvements in a medical (vascular closure) device. (2003)

Southwest Pet Products, Inc. at al. v. Koch Industries, et al., U.S. DISTRICT COURT, DISTRICT OF ARIZONA

Expert report and deposition testimony on damages, including added costs and lost profits, arising from contamination and recall of premium pet foods. (2003)

OTHER LITIGATION EXPERIENCE (selected matters, by type of case)

Antitrust Damages

Intergraph Corporation v. Intel Corporation, U.S. DISTRICT COURT, NORTHERN DISTRICT OF ALABAMA

Expert report and deposition testimony on lost profits, lost going concern value, and reliance damages arising from alleged fraud, suppression of material facts, breach of warranty, interference with business relationships, and related business torts. (2002)

Kopies, Inc., et al. v. Eastman Kodak Company, U.S. DISTRICT COURT, NORTHERN DISTRICT OF CALIFORNIA

Multiple expert reports and deposition testimony on price discrimination and antitrust damages to end-users of high-volume copiers arising from a manufacturer's refusal to sell parts to independent service organizations and from other anti-competitive behavior. (1997)

Richie v. American Council on Gift Annuities, U.S. DISTRICT COURT, NORTHERN DISTRICT OF TEXAS

Expert report and testimony in deposition and at a hearing on class certification, testimony on methods of calculating class-wide antitrust and other damages arising from the illegal sale of annuities and trust services. (1995)

Banking

Fifth Third Bank v. The United States, U.S. COURT OF FEDERAL CLAIMS

Retained by the U.S. Department of Justice to analyze financial issues and damages arising from the government's breach of contract for the acquisition of a group of failed savings and loans; provided analytical support for expert witness Professor Anthony Saunders of New York University. (2005)

Hamilton v. Delta National Bank, CALIFORNIA SUPERIOR COURT, STANISLAUS COUNTY

Deposition testimony on financial issues and damages in a lender liability lawsuit. (2000)

Tangtrongsakdi v. Bangkok Metropolitan Bank, CALIFORNIA SUPERIOR COURT, COUNTY OF SAN FRANCISCO

Deposition testimony on the structure and economic substance of a complex real estate financing transaction and on the effects of alleged irregularities in a lender's loan processing procedures and loan documentation. (1999)

Ben S. Branch, Trustee for the Bank of New England Corp. v. Federal Deposit Insurance Company, U.S. DISTRICT COURT, DISTRICT OF MASSACHUSETTS

Led a team including four academic economists retained by the FDIC to investigate all aspects of the failure of a large commercial bank and to respond to charges by the bankruptcy trustee for the bank's parent holding company that regulatory agencies had arranged the fraudulent conveyance of holding company assets to the bank. (1996)

Vappi & Company v. U.S. Trust, MASSACHUSETTS SUPERIOR COURT, SUFFOLK COUNTY

Deposition and trial testimony assessing the reasonableness of a lender's financial analysis of a failed high-rise condominium project. (1993)

Sprincin Company v. Security Pacific National Bank, CALIFORNIA SUPERIOR COURT, COUNTY OF SAN FRANCISCO

Deposition and trial testimony on damages to a developer arising from a bank's alleged failure to fulfill terms of a contract to sell land to the developer and provide construction financing. (1990-1991)

Damages Arising in Commercial and Contract Disputes

Westside Cellular, Inc. d/b/a Cellnet, Inc. v. New Par, et al., COURT OF COMMON PLEAS OF CUYAHOGA COUNTY, OHIO

Analyzed damages to a reseller of cellular telephone services and related valuation issues arising from alleged overcharges for wholesale minutes; provided analytical support for expert witness Professor David Sibley of the University of Texas at Austin. (2002)

Miller-Thompson Constructors, Inc. v. Lucas Marine Construction, Inc., AMERICAN ARBITRATION ASSOCIATION

At an arbitration hearing, testimony responding to a claim for diminished value of goodwill arising from an alleged wrongful termination of a marine construction contract. (2002)

ATS Products, Inc. v. Fab-Tech, Inc., CALIFORNIA SUPERIOR COURT, COUNTY OF SAN FRANCISCO

Expert report and deposition testimony on profits lost as a result of a competitor's alleged false advertising. (1998)

Katz v. Karmouche, CALIFORNIA SUPERIOR COURT, COUNTY OF SAN FRANCISCO

Trial testimony on business income lost by a partner in a law firm because of injuries sustained in an automobile accident. (1998)

JMB Realty Corporation v. Cadillac Fairview, ILLINOIS CIRCUIT COURT, COOK COUNTY

Deposition and trial testimony on damages to a real-estate asset-management firm arising from breach of a long-term contract for real estate advisory services. (1995)

Chaminade, Ltd. v. The Owl Companies, AMERICAN ARBITRATION ASSOCIATION, SAN FRANCISCO

Testimony, in deposition and at an arbitration hearing, on increased energy costs incurred by a hotel/conference center as a result of alleged negligence, misrepresentation and breach of contract by the developer, builder, and operator of an energy cogeneration facility. (1995)

Twin Cities Insurance Company v. Seeno Construction Company, U.S. DISTRICT COURT, DISTRICT OF NEVADA

Deposition and trial testimony on damages to a large regional developer/homebuilder caused by an insurance company's refusal to pay a significant claim. (1993)

Trammel Crow Company v. Peterson, DISTRICT COURT, DALLAS COUNTY, TEXAS

Deposition testimony related to accounting and valuation issues arising in a dispute among partners of the one of the country's largest real estate developers. (1993)

RTR Trading Company v. The Sharper Image, CALIFORNIA SUPERIOR COURT, COUNTY OF SAN FRANCISCO

Deposition testimony on damages to an international trading company arising from a specialty retailer's decision to cancel an allegedly non-cancelable order for 10,000 units of a home burglar alarm. (1991)

J.W. Mitchell Company v. Boral Industries, CALIFORNIA SUPERIOR COURT, ORANGE COUNTY

Deposition and trial testimony on damages arising from breach of a contract for the purchase and sale of a rock quarry. (1990)

Boeing Construction (Boecon) v. Catalytic, U.S. DISTRICT COURT, SAN FRANCISCO

Deposition testimony on statistical issues in the analysis of data on productivity of workers during construction of a power plant, in response to a contractor's claim for damages caused by disruption and forced acceleration. (1989)

Huston Enterprises v. Tri-C Machine Shop, CALIFORNIA SUPERIOR COURT, SACRAMENTO

Deposition testimony on profits lost by a manufacturer of tire-shredding equipment when a machine shop failed to complete design and fabrication of a prototype tire-shredder. (1987)

Intellectual Property

ATS Products, Inc. v. Shea Technology LLC et al., U.S. DISTRICT COURT, NORTHERN DISTRICT OF CALIFORNIA

Expert report and deposition testimony on financial issues arising from alleged breach of a "most favored licensee" clause in a technology license. (2002)

Atmel Corporation v. Silicon Storage Technologies, Inc., U.S. DISTRICT COURT, NORTHERN DISTRICT OF CALIFORNIA

Expert report, deposition testimony and trial testimony on price erosion damages arising from alleged infringement of patents disclosing technology used in non-volatile memory devices. (2001-2002)

Overhead Door Corporation v. The Chamberlain Group, U.S. DISTRICT COURT, NORTHERN DISTRICT OF TEXAS

Deposition testimony on reasonable royalties and lost profits damages arising from alleged infringement of a patent disclosing coding technology used in garage door openers. (2000)

Trend Micro Inc. v. Network Associates, Inc., U.S. DISTRICT COURT, NORTHERN DISTRICT OF CALIFORNIA

Deposition testimony on reasonable royalties and lost profits arising from alleged infringement of a software patent. (2000)

Symantec Corporation v. McAfee Associates, Inc., U.S. DISTRICT COURT, NORTHERN DISTRICT OF CALIFORNIA

Deposition testimony on benefits gained through infringing use of copyrighted software code and on profits gained through alleged wrongful use of a competitor's customer list. (1998)

Securities, Derivatives, and Other Finance Matters

Securities and Exchange Commission v. PIMCO Advisors Fund LLC et al., UNITED STATES DISTRICT COURT, SOUTHERN DISTRICT OF NEW YORK

Retained by the SEC to analyze financial issues and damages arising from market timing in PIMCO mutual funds; provided analytical support for expert witness Professor Sheridan Titman of the University of Texas at Austin. (2006)

In re PMA Capital Corp. Securities Litigation, U.S. DISTRICT COURT, EASTERN DISTRICT OF PENNSYLVANIA

Retained to analyze the efficiency of the market for common stock of PMA Capital Corp. and to estimate aggregate damages for use in settlement negotiations; provided analytical support for expert witness Professor Anthony Saunders of New York University. (2006)

United States of America v. Daniel Bayly, et al., U.S. DISTRICT COURT, SOUTHERN DISTRICT OF TEXAS, HOUSTON DIVISION

Retained by the U.S. Department of Justice to analyze harm caused by the "Nigerian barge" fraud at Enron; provided analytical support for expert witness Professor Anthony Saunders of New York University. (2004-2005)

In re Asia Pulp and Paper Securities Litigation, U.S. DISTRICT COURT, SOUTHERN DISTRICT OF NEW YORK

Retained to analyze the efficiency of the market for securities of Asia Pulp and paper, to estimate aggregate damages for use in settlement negotiations, and to assist counsel in drafting a plan of allocation; provided analytical support for expert witness Professor Anthony Saunders of New York University. (2004)

Willis v. J.G. Wentworth Structured Settlement Funding Corporation, CALIFORNIA SUPERIOR COURT, COUNTY OF SAN FRANCISCO

Deposition testimony on the nature and characteristics of certain financial transactions involving payment streams derived from structured settlements. (1999)

Los Rios Community College District v. County of Sacramento, CALIFORNIA SUPERIOR COURT, SACRAMENTO COUNTY

Testimony, in deposition and at a mini-trial, on sampling procedures and accounting issues arising from the County's management of a pooled investment fund and on proper allocation of interest earned by the fund among pool participants. (1989-1990)

Long Island Lighting Company v. General Electric Company, U.S. DISTRICT COURT,
EASTERN DISTRICT OF NEW YORK

Deposition testimony related to calculation of additional financing costs attributable to delays caused by alleged errors in design of the containment vessel for the Shoreham Nuclear Power Plant. (1990)

Kirk Corporation v. First American Title Insurance Company, CALIFORNIA
SUPERIOR COURT, EL DORADO COUNTY

Deposition testimony on the effects of repeated refinancings and related fees and costs on the financial viability of a condominium/time-share project at a Lake Tahoe ski resort. (1987)

OTHER CONSULTING (non-litigation, selected matters)

Led a team of consultants providing assistance on a broad range of operational and strategic issues to a rapidly growing design and construction firm. Assignments included restructuring operations to support future growth, revamping reporting and management support systems, implementing a planning and budgeting process, and preparing business plans for several new ventures.

Led a team of consultants preparing product-development strategies for a low-cost internet-access device. Conducted market research to assess consumers' willingness-to-pay for the device and for information services accessible via the device, and prepared projections of cash flows for the project under various scenarios.

Valued a lessor's interests in a portfolio of long-term ground leases to assist owners of condominiums in negotiating a buy-out of the leases.

Investigated the impact of clean-fuel regulations on the costs and competitive position of a mid-size oil refiner. Testified at hearings held by a state regulatory agency.

Analyzed conditions in Canadian financial markets and prepared a rate-of-return study for a Canadian natural-gas-pipeline company to assist the company in establishing tariffs for transportation services.

Multiple engagements related to financial management of a fourteen-year project to develop a disposal site for low-level radioactive waste in California. Designed and implemented a system for monitoring costs of engineering and environmental studies and public-relations efforts to comply with state regulations. Recommended pricing strategies to provide a reasonable return on investment for the developer/operator of the facility. Prepared a report on the prudence and reasonableness of certain costs incurred to select a site and develop the facility.

Conducted surveys of users of personal computers and analyzed other data sources to quantify the benefits flowing from the company's \$70 million investment in personal computers. Identified constraints limiting benefits of PC-use and recommended ways to increase returns on existing and future investments in personal computers.

Led a team of consultants helping to plan the introduction of a family of innovative LAN bridge/routers for data communications networking. Developed a financial model to generate cash flow projections for the products under alternative scenarios.

Reviewed operations, procedures and program requirements to improve management of this agency's Health Facility Mortgage Insurance Program and assess the solvency of the agency's Health Facility Construction Loan Insurance Fund.

Prepared an economic analysis and financial projections for a large geothermal energy plant to assess the ability of the project's sponsor to repay partial funding of the project by the State of California.

Managed feasibility studies of 40 energy-development projects and assessments of the creditworthiness, financial strength and management capabilities of the projects' sponsors. Technologies used by the projects included compressed air energy storage; methanol-fueled cogeneration-turbines; low-head hydroelectric power generation; and solar electric/thermal hybrid power-and-hot-water-heating systems.

Prepared a business plan for development and marketing of a computer system to provide fast and efficient access to comprehensive, up-to-date information needed by mechanics repairing automobiles. Assisted in negotiations with venture capital firms to secure \$4.5 million in financing for product development and test marketing.

Prepared economic evaluations and feasibility studies of municipal energy projects, including both large-scale and modular waste-to-energy facilities.

EXHIBIT 3

RESPONSIVENESS OF THE PRICE OF SCIENTIFIC-ATLANTA COMMON STOCK TO NEW INFORMATION

Regression model

Scientific-Atlanta's Stock Return

$$= 0.0010 + 1.8914 * CRSP + 0.5607 * INDUSTRY_ORTHO + \sum_{i=1}^{17} \lambda_i * (\text{Event Dummies}),$$

CRSP: Value Weighted CRSP returns with dividends

INDUSTRY_ORTHO: Net of market return (CRSP) on the S&P Communication Equipment Index

Event Dummies: Dummy variables indicating 17 days during the study period (class period, plus one year before and one year after the class period) on which there were large and statistically significant abnormal movements in the price of Scientific-Atlanta's stock in response to news releases.

Data Source: Bloomberg, CRSP
